Vacuum Washing and Drying Equipment using hydrocarbon wash [winning the Chief Prize of the Kyushu Trade and Industry]

This equipment washes lead frame, flux, pressed parts by ultrasonic waves and rock, and then dries them in a vacuum quickly. It performs these process automatically.

All wash is collected and reused in sealed vacuum room.

So it makes running cost lower, and cares for environment at the same time. This epoch-making equipment can be produced in large quantities.

Installing this equipment makes possible to get ISO-14000.

Description of Business

special maker of washing machines

Making good use of our experience of washes and washing machine in water, two years ago we developed vacuum washing and drying machine using wash which is soluble in hydrocarbon. We gave satisfactory results in major lead frame makers. We were completed to make short length washing and drying machine for lead frame. In the business, it is recognized that it is very difficult thing.

We are selling the products more and more to major companies, as substitute for pressed parts, trichloroethylene or methylen chloride.
